# Host Analytics Data Integration

Datasheet

Host Analytics Data Integration makes it easy to connect and merge data from different places — general ledgers, ERP, CRM, and other sources — into Host Analytics Cloud EPM Suite. Be confident in your data accuracy with imports directly from source systems to eliminate manual entry errors and automated refresh to ensure up-to-date data.

Drive Faster Insight

Use Host Analytics' flexible and automated connection options to bring up-to-date information together for analysis. With automated integrations, you no longer have to wait for days in an IT queue for new data loads. Start driving accurate, timely information access for you and your stakeholders.

Connect to Any Internal or External Sources

Seamlessly connect to all data sources, including internal, on-premises systems and external cloud applications. Whether it's a general ledger, ERP, CRM, Excel or CSV flat file, a custom database, or an industry-specific system, Host Analytics can connect to it. Between our web services and on-premises APIs, pre-configured connectors, and Import Wizard, you're 100% covered.

INTEGRATION

NETSUITE — ONE SYSTEM. NO LIMITS.
SAP Business ByDesign
Intacct.
salesforce
successfactors — An SAP Company
workday.
ADP
Microsoft Dynamics
ORACLE
SAP
EPICOR

hostanalytics

KEY BENEFITS

- Seamlessly connect to all data sources — internal and external, cloud and on-premises
- Drive faster insight with up-to-date information via automatic data refreshes
- Gain confidence in data quality and accuracy via repeatable financial processes with full audit trails
- Align external systems with Host Analytics thorough flexible mapping rules
- Go live in days instead of months by importing existing data

KEY FEATURES

- Integrate directly with business systems — GL, ERP, CRM, and more
- Bring in data and metrics from external sources – industry benchmarks, exchange rates, economic indicators
- Update data automatically or on-demand without IT involvement
- Secure your data via password encryption and transfers via stringent data communications standards

Trust Your Data Again

Manual entry and copy/paste lead to difficult-to-find errors in a sea of cells from linked, multi-tabbed spreadsheets. When data comes directly from the source systems, those problems are eliminated. With automatic data refreshes, trust that data is both accurate and current.

Highlights

Pre-mapped Connectors Host Analytics Connector Packs allow you to integrate business systems, such as ERP, CRM, HR, and payroll, to the Host Analytics Cloud EPM Suite. Save time by configuring pre-mapped connectors instead of building integrations from scratch. Select from more than 70 standard connectors for common business systems, including NetSuite, Workday, ADP, Salesforce, Infor, SAP, and Oracle.

Box Integration Box integration automates the data load process in Host Analytics. Data files on your Box account load into the Host Analytics Cloud EPM Suite based on the configuration of a Host Analytics Data Load Rule. Take advantage of scheduling Data Load Rules to automatically load files during non-business hours.

API Connectivity Integrate to ANY source using Host Analytics APIs, including homegrown applications, custom databases, and legacy systems. Move data from isolated, hard-to-use systems into the Host Analytics Cloud EPM Suite for broader visibility and use by the entire organization.

Data Import Wizard The Host Analytics Data Import Wizard is ideal for infrequent data loads or when you have only a few chart of accounts (COA) or cost center changes monthly. Upload flat files and excel spreadsheets through a guided, click-to-load process that moves data from other systems into the Host Analytics Cloud EPM Suite. Alternately, for minor one-off updates, use copy and paste — point, click, copy, paste, and done!

Metrics and Benchmarks from External Sources Some organizations measure business performance against industry benchmarks and economic indicators. Others need daily exchange rates to support currency translations of budgets or actual results. Host Analytics connects with external data feeds to automatically collect the information you need to run your analyses.

Security and Audits With the Host Analytics Cloud EPM Suite, your data is secure and auditable — protected by encrypted passwords and transferred according to the most stringent data communications standards. Strong internal controls ensure access to designated areas, restrict access to unauthorized areas, and record data changes in an audit trail.

Single Sign-On Host Analytics supports single sign-on (SSO) too. We seamlessly work with your existing SSO service, such as Okta, Symplified, PingIdentity, and Intel. Your users can easily and securely access your Host Analytics application and information using the same single password used for other enterprise applications.

About Host Analytics

Host Analytics is an established industry leader and a low-risk choice for public companies and private organizations, from the fast-growing to the Fortune 500. Host Analytics is the only cloud vendor to be on the Gartner Magic Quadrant for Corporate Performance Management Suites for the last six years.

With Data Integration bringing operational, financial, and external data together in one cloud EPM suite, you can plan, monitor, and adjust strategy with new insights. Empower managers in your organization to view their numbers, and see how they contribute to company growth and success. Finance users can move beyond collecting and reporting data to running simulations and what-if analyses.

> *"We plan to take every data source within the company and have Host Analytics be our nucleus and our central repository for all of our information."*

Jim Perry, Finance Manager | iCIMS
