

INSIDE SAP DASHBOARD

Interactive, On-Demand Analysis & Dashboards For SAP
Delivered In Weeks

You may have heard some of our customers talking about our Qlik dashboards for SAP. We frequently hear SAP users talk about the difficulty of accessing and analysing their SAP data. ABAP queries, SAP BW, and module reports take users part way to the insights they need but have serious shortcomings. It is difficult to interact with the SAP system across its entire dataset, or even across multiple dimensions within tables. Conducting reporting and analysis across tables and integrating data from other systems are also extremely challenging.

The hours required for skilled staff to work on spreadsheets or to maintain SAP's cube-based BI can add substantial operational expense and increased maintenance costs for organisations running SAP. This is especially true when requirements include combining SAP data with data from other sources, and when large data volumes cripple performance. As a result, users can often lack visibility into their business processes and critical insights remain hidden away inside the SAP system.

Inside Info helps people see and understand their business data to improve operational and financial processes. Inside Info are pure, best-of-breed analytics specialists. Since 2003 we've been working with over 100 clients in developing successful enterprise business intelligence dashboards and reporting solutions.

As a result our experiences have allowed us to develop the **Inside SAP Dashboard** – a proven best-practice business application developed by our Senior Consultants that delivers extraordinarily sophisticated interactive analysis and consolidated view of customer, financial, sales and distribution data from SAP and other systems. Based on an industry-leading, certified Qlik SAP Connector Powered by SAP NetWeaver and integration with SAP HANA, the **Inside SAP Dashboard** is used by firms like Orora, Porter Davis, Daikin and CS

Energy. Analysis that is highly visual, affordable, fast to deploy, simple to use and easy to change.

The **Inside SAP Dashboard** significantly fast tracks BI projects and increases user adoption by leveraging off the learnings of others, with customers typically up and running in about 30 days.

Inside Info offers the full spectrum of business analytics software and services including licensing, scoping, design, development, integration, training, project management and support services for the leading Qlik business intelligence platform and Microsoft BI platforms.

Our Inside SAP Dashboard Provides:

- **A one-screen view of all the facts:** consolidating data from SAP modules, SAP BW, SAP HANA and other data sources to ensure cross functional visibility, so you have a clear view of sales, inventory, service levels, customers, financial and other operational performance. A number of filters allow you to understand key measures against budget over any time period compared to another. Linking transactional processes and uncovering business opportunities.
- **A 360 degree view of customer behaviour, product, channel, supply chain & financial performance:** Ability to react quicker to opportunities that arise in the business and isolate areas for focus.

- **Near real-time visibility into operations:** Instead of out-of-date reports. On-demand self-serve analysis of data, often replacing hundreds of OLAP based reports and empowering users to perform their own analysis reducing IT support by up to 90%. Users report 54% less time accessing information and 51% less time analysing it. (IDC)
- **Sub-second query response on very large data volumes** into the hundreds of million records without losing transactional level detail, with data refreshing as often as your underlying source systems.
- **Ability to view information at a high-level, transactional-level and anywhere in between** in any path decided by the user, with no pre-defined drill-down paths. If you've got a business question, odds are you'll be able to answer it – you don't have to wait for another report. Easily consolidates data from any and multiple data sources.
- **Simple to use, available everywhere:** Access your dashboard from any device whether this be laptop, iPad, the web or your mobile device, with the same experience on each, being HTML5 compliant.
- **Very fast implementation cycles:** A typical project is 30 days and is 53% the total cost of other BI solutions according to IDC. While adding in a new data source or building a new view of the data can be modified very easily within a few hours. Powered by Qlik's Connector certified by SAP NetWeaver and Certified for Integration with SAP HANA. This provides intuitive, self-serve dashboards and reporting of SAP® R/3®, mySAP™, SAP BW, SAP HANA and BEX queries with data from non-SAP systems. All of this data is available to users with a single click.

- **Built on the scalable, enterprise class Qlik business intelligence platform:** Qlik is rated by Gartner in its 2018 Magic Quadrant as a BI leader, used by over 45,000 businesses globally and pioneer of the Data Discovery end-user approach to analytics.

How The Qlik Connector Works

By deploying the Qlik Connector as part of the **Inside SAP Dashboard**, it works as a read only Remote Function Call and enables direct access to SAP data, tying directly back to FI, CO, SD, MM, and other SAP modules. These analyses can also combine non-SAP data sources in a rapid, flexible, and easy way. Users gain access to analysis at both an aggregated level and a detailed transaction level.

What Makes Us Different

Inside Info was founded to bring the promise of analytics to a much broader group of people making it simpler, more engaging, affordable and rapid to deliver. For over 15 years our sole focus has been to help mid sized and enterprise businesses use data to perform as well as they possibly can, as Business Intelligence specialists. We have a proven track record of client success currently supporting over 100 clients nationally, having delivered over 600 BI projects. We can offer strength & stability as a provider with the flexibility & personal touch of a boutique partner. This track record has allowed us to build industry, business function and system templates based on the leading Qlik and Microsoft BI platforms that speed up data integration, application development & delivery.

We bring strong industry and business process expertise to your project that many cannot. We can assist in complementing your existing inhouse resource, manage adhoc report requests or in the areas of analytics business requirements definition, business scoping, consolidating data sources, data integration, data management, BI application design, implementation and training services.

Inside Info launched Qlik to Australia in 2003, we're the top level Elite Qlik Partner and a skilled Microsoft Partner. Our BI practitioners each have 10+ years' experience to guide you along the way. So, if you're looking to become more data-driven and take your use of data to the next level, we'd love to hear from you.
